Focused run sap.

After upgrading to sap gui 7.70 you can change the default browser from internet explorer to edge. more about sap support for browsers in general can be found in this blog. prerequisite: install webview2leer first note 2913405 - sap gui for windows: dependencies to browsers / browser controls. this note describes the need to download and install the microsoft Webview2.impact of webview2: 2901278 - sap gui html control based on chromium edge: legacy html does not work (rightly) / current limitations. browser ajote can now go to the sap 7.70 gui configuration and change the default browser in the interaction design / control configuration: if the internet explorer setback is still necessary, read this note: 2957665 - sap gui html control: browser control fallback Configuration.OSS relevant oss notes: next to nzdtm (near zero time inactivity now) This new option further reduces the downtime of an update to a newer version. the zdo option is primarily available for s4hana updates (e.g., s4hana 2020 update to s4hana 20201), but is also available for products based on the same abap version, such as sap focused run. How does the zdo work? zdo is the next evolution of the shadow system. Now not only is the code duplicated, but also the data and garlic. This is done in a so-called bridge system. publications are duplicated in the main system and the bridge. In this way, business inactivity time is reduced even further: a down ramp is still needed, restart and ramp up. technical background all technical backgrounds and restrictions are listed in note 2707731 de oss - prerequisites and restrictionsSUM zero inactivity time for SAP s4hana and ADM330E training. The note also indicates that the basic person must have followed the adm330e formation before the client can perform the zdo option. Opción is released to after training. Why are training required? The option is technically very pleasant, but also complex (the updates are made both in the ancient and new version). Restrictions and execution must be done correctly and in a high quality way. This cannot be done without adequate formation. You should also make a complete essay of the ZDO update dress, including people who publish data in the system during the bridge phase. Execution of the problems of Zdodo during the execution of Zdo, will obtain more problems and errors in comparison with the optimized scenarios for the time of inactivity. For this reason, the first ZDO update that executes must be in a sandbox system. Preferably as a copy of your productive system. They will learn many things in the Sandbox update, to make real update more later. Addonsalgunos Addons could block the update. Some can still be allowed in the update, but it cannot be updated together with the update and have to remain in the same version. In the lower part of the note 2707731 there is an always updated Excel file that contains the assignment list for Addons. OSS notes in zdo chefs phase the prechecks and later even in the construction of the shadow system, SUM will come with list of notes OSS that need to be applied in the main or shadow system. For real update: and apply all the notes on the development system before the update and transport of the production. Database inconsistencies All inconsistencies in the database must be resolved. Via Se14 repair, see the blog. Bizdo system settings is currently compatible with the integrated bi scenario. This may mean that you need your IB team for help ALGALN IB content. To find out what is blocking; go to transaction se24 and entered in cl s utilities class. Start the test tool and all launching get system scope. If the answer is Data warehouse, this will block the update. Use your purification skills (or ask the ABAP developer) to see what elements are launching road blockages. Then deactivate or eliminate that (with help of your BI team).Old HANA transport containersSome old HANA content might block the ZDO upgrade. Read more on this in OSS note 2982320 eAAA HTA for HDI: Error in execution of HDI call: insufficient privilege. Steps to solve: repair privileges on the ABAP HANA user. Run program SCTS HTA ADMIN in repair mode.BackgroundBackground blog from SAP: read here. After many years of faithful service, SNOTE got a revamp from SAP.Questions that will be answered in this blog are:How does the new revamp of SNOTE look like?How can I get this new revamp of SNOTE?Can I download latest versions of OSS notes in batch mode?If you update main SNOTE OSS note 1668882 eAAA Note Assistant: Important notes for SAP BASIS 730,731,740,750,751,752,753,754,755,756, you will get this message:New revamp SNOTEOSS note 3051466 eAAA Simplified Note Assistant: SNOTE Revamp describes the main functions and background of the revamp of SNOTE.Main changes listed in the note:A new Home screen, where the user work list and Note Browser is integrated in a single screen. The work list and search results are displayed in tabs to improve usabilityPossibility to perform a Note Search for Valid Notes in SAP ONE Support Launchpad, and then download it from the search resultsA Provision to mark/unmark Notes as your eAAAFavoriteeAAAOption to set up background jobs which will automatically look for and if required, download newer version of Notes which are already in your systemImplementation of Notes has been streamlined with lesser pop-ups and better error handlingImproved display of Manual Text during a Note implementation. It will now also be displayed during de-implementation of a Note.Changes in the Note Display screen, including a compact header section, provision to display only valid corrections and only the actions that will be possible for the given Note will be displayedAn improved display of Note LogA Provision to launch reports which will show the of all pre-requirement and successor notes, or the list of repository objects affected by the notability of customizing the note assistant using the "Note wizard user configuration". The note download procedure can also be provided to Tiseadditionally, the tool will now automatically remember some of the user options made in the Interfacestarting Snote user now looks like this: the Settings button shows you easily can set your own preferences: the OSS version update is possible Now through the menu download the latest version of the notes, and then you can choose to run in the foreground or (new feature) in the background. For the latest update you can now get a good overview of the updates results: installing new Snote Renewal Version The new version of Snote renewal is standard in S4HANA 2021. You can also install it separately. Step to follow: SAP Early Watch (EWA) contains information about your system that you can already or in the future impact performance and safety. EWA review is needed. This blog contains tips and tricks for the technical functioning of EWA reports. Or you can use SAP Focused Run or Solution Manager as a data collection system, and then transmit the information to SAP. The final result can be seen in the online EWA workspace on the SAP support portal. More information about EWA's workspace can be found in this blog. Since most of the new features are added to EWA's workspace, it is the best way to move forward. It's also less maintenance work. All you have to do is keep sending the data. SAP performs any new report function. SAP will also be careful to update the content. So in general, yes PAS PAS ne putes.nuR odacofoe PAS ed s©Avart a reganaM noituloS ed s©Avart a AWE PAS ed ojabart ed oicape la sotad sol aAve ednod oledom la railmac eredisnoe reganaM noituloS PAS ne etematecerid AWE n'Aicareneg al odneicah jAise RunA good manual for SAP Focused Run for EWA setup can be found on these reference sites:Troubleshooting guide for EWA in SAP Focused Run, follow this link.Also check OSS note 2715504 eAAA Configure Early Watch Alert Job.EWA in solution managerGeneral activation process of EWA in solution manager is described in OSS note 2729196 eAAA General Process of EWA Generation in SAP Solution Manager 7.2. If an ad hoc extra EWA needs to be generated, follow the steps in OSS note 2337073 eAAA How to Create an Ad Hoc EarlyWatch Alert SAP eAAA Solution Manager 7.2.Adding email receivers is explained in OSS note 2282944 eAAA EarlyWatch Alert: Solution Manager 7.2 how to setup/configure EWA reports or add email recipients.Content update of SAP EWA content in SAP solution manager is required at regular intervals. The procedure is described in OSS note 2732608 eAAA How to replace the Service Content (AGS_UPDATE).Known issue list for EWAThe known issue for EWA is kept as list by SAP on this page.Troubleshooting when EWA is not sent to SAPWhen you have issues that the EWA data is not sent to SAP properly, follow the checks in OSS note 1684537 eAAA EarlyWatch Alert not sent to SAP: troubleshooting guide.Setting up the BKF section in the EWAOSS note 2282310 eAAA Business Key Figures for EWA report contains the steps to get the BKF chapter activated.Make sure in the managed system the user running the EWA data collection has the special role SAP_MANAGED_BPOANA_DIS. This is cause number 1 of issues.If you make the settings, you would have to wait 3 weeks before the data is filled properly.To gain speed, you can use the Express option. This option is explained in OSS note 2821062 eAAA BKF Express Option/Manually running the BPFMON job.The UI of Business key figures Chapter Setting settings in the EWA is terrible. Please use the scroll bars to go to the right part. And the instruction mentions that you need to double click on a button or tab.
